Highlights and Objectives

- **An Inflation Hedge Solution:** A global real asset solution that dynamically participates in equity, commodity, real estate, infrastructure and TIPS.
- **Dynamic Positioning to Manage Downside Risk:** Systematic portfolio management approach aims to reduce risks when volatility heightens
- **Outperforms the Benchmark over a Full Market Cycle:** The strategy aims to outperform Barclays Treasury Inflation Protection Security Index over a full market cycle with lower drawdown and similar volatility.

Disclosures

This fact sheet is for the purpose of information exchange. This is not a solicitation or offer to buy or sell any security. You must do your own due diligence and consult a professional investment advisor before making any investment decisions. The use of a proprietary technique, model our algorithm does not guarantee any specific or profitable results. Past performance is not indicative of future returns. The performance data presented are gross returns.

The risk of loss in trading securities can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. All information posted is believed to come from reliable sources. We do not warrant the accuracy or completeness of information made available and therefore will not be liable for any losses incurred.

The investment performance shown on this page for the Julex Real Assets strategy is HYPOTHETICAL. It is based on the back tests of historical data. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the presentation of hypothetical performance results and all of which can adversely affect actual trading results.

Note on Data

In the back test, we used the index returns in case the historical returns of the ETFs are not long enough.
